

Success Story **CLECIM**® Dynawipe

CLECIM SAS is proud to contribute positively to the launch by **ArcelorMittal** in India of its **Magnelis**® product (a brand owned by the **ArcelorMittal group**). This is the result of a close cooperation, during which we were able to achieve the precise integration of the respective equipment provided by **ArcelorMittal and CLECIM** for the corrosion protection coating process.

CLECIM® **Dynawipe** is coating drying solution for galvanization processes. This solution, chosen for **ArcelorMittal Nippon Steel India's (AM/NS India)** galvanization line N°4 at **Hazira, India** is a critical technology at the essential step of coating deposition.

At our Savignieux facility, **CLECIM SAS** has an engineering office and a factory that enables a fine interface between the design, fabrication, and testing phases. A complete assembly accompanied by testing was carried out in our workshop to ensure perfect compatibility and functionality of the entire technological ensemble consisting of equipment provided by **ArcelorMittal and CLECIM**® **Dynawipe coating drying system**.

On our client **AM/NS India's** site, **CLECIM** was able to demonstrate the achievement of the expected performance level. This was made possible by our ability to adapt and our reactivity on the ground to ensure the necessary support for production.

We are proud of the progress made, both in terms of these high-performance and robust technologies that we make available on these critical new markets, but also in terms of the human journey with the **ArcelorMittal** team and **AM/NS India** in the context of an ambitious project that sets a significant milestone on the Indian market.
